Well Women Screening Programmes

Women's Health Clinic

Well Women Screening Programmes

Health is a top priority for women juggling work and home responsibilities. At HKSH, the Women's Health Clinic is committed to improving women's health and addressing their needs at every stage of life. With routine screenings and other options for all age groups, health problems can be detected at an early stage to facilitate timely diagnosis and effective follow-up.

- **Breast Examination and Pap Smear**

  Breast cancer and cervical cancer are common among women. Early detection through regular screenings can lead to prompt treatment and improve outcomes.

- **Bone Densitometry**

  Osteoporosis is common in post-menopausal women. If undetected, even a minor accident or trauma may lead to fracture. Early detection of bone loss can facilitate prompt treatment, restore lost bone mass, and reduce the chance of fractures.

  In osteoporosis assessment, dual-energy X-ray absorptiometry (DEXA) is now used to measure the density of major bones such as spine and femur. Its radiation dose is only one-tenth of that of chest X-ray.

Item	Well Women Screening	Complete Well Women Screening	Well Women Menopause Screening	Complete Well Women Menopause Screening
	Mammogram $6,400 or Ultrasound $5,340	$7,500	Mammogram $7,530 or Ultrasound $6,620	$8,850
